Healing Collar Selection Guidelines

Selecting A Healing Collar:

— Determine the size of the implant platform
— Select the emergence profile that best suits the site being restored. The profile should match the transfer and abutment to be used
— Select the cuff height so that the top of the component protrudes slightly above the surrounding tissue. The options are 3.0 mm, 5.0 mm or 7.0 mm

Components For Impression Transfers

Multi-Purpose Fixture Mount/Transfer

Tapered Screw-Vent and and Trabecular Metal Implants are packaged with a Fixture Mount/ Transfer that serves multiple functions:

Implant Placement

The Fixture Mount is used as a means to deliver the implant to the surgical site and provides convenient color-coded identification that matches the implant analogs.

Green	3.5 mmD Platform
Purple	4.5 mmD Platform
Yellow	5.7 mmD Platform

Implant-Level Transfer

The Fixture Mount then functions as a transfer that is conveniently pre-attached to the implant. Surgeons can take an immediate index or impression to complete the transfer, or restoring doctors can use it after the healing period. For direct impressions use the long screw DHTS.

Preparable Temporary Abutment

The Fixture Mount may also be prepared to function as a temporary abutment while the final restoration is being fabricated. Note: The Fixture Mount is not indicated as a final abutment as it does not achieve the friction-fit connection with the implant.

Fixture Mount/Transfers

Includes a Retaining Screw (URS2). Can be used as a Preparable Temporary Abutment.

Dríva Surgical Drills

A product of extensive research and testing, high performance and internally-irrigated Dríva Drills are reusable and deliver high levels of sharpness and longevity.

— Enhanced drill design to facilitate cleaning and sterilization
— Color bands and size etching help in simple identification and replacement
— All drills are made of an advanced grade of stainless steel, with a progressive geometry that provides high levels of strength and cutting efficiency
— A corrosion-resistant coating protects drill sharpness
— Grooves and laser-etched depth bands deliver improved visibility
